## Maple Systems Dual-Ethernet HMIs

Print Email Tweet Share G+1 in Share

Two dual-Ethernet models have been added to the HMI series: a 7-in HMI and 9.7-in HMI. These HMIs divide industrial control and remote access functionality between two distinctly separate Ethernet networks: an internal industrial communications network and an external WAN. This offers customers a connected IIoT while providing manufacturers with increased security of internal control networks. The devices are equipped with two 10/100/1000 Base-T Ethernet ports and up to a 1-GHz processor. Both have an analog resistive touchscreen, a plastic enclosure, three serial ports and one USB host port.

Category: Operator Interface Hardware  
 Product Type: Displays  
 Manufacturer: Maple Systems
